

Report Generated:	March 16, 2026 at 14:29 UTC
Analysis Window:	Last 24 hours (2026-03-15 08:59 — 2026-03-16 08:59)
System Version:	SentinelShield v2.0 (Phase 1+2+3+4)
Detection Engine:	31 Signatures + ML Isolation Forest + GeoIP

1. Executive Summary

Metric	Value	Status
Total Requests Analyzed	8	
Requests Blocked	3	37.5% block rate
Requests Flagged	1	Under review
Requests Allowed	4	Clean traffic
Zero-Day Anomalies (ML)	3	ML detected
IPs Currently Banned	1	Active bans
Critical Alerts	2	

During the analyzed period, SentinelShield processed **8 HTTP requests** and detected **4 malicious or suspicious requests** (37.5% block rate). The ML anomaly detector independently identified **3 potential zero-day attacks** with no matching signature rules. Overall risk level: **MEDIUM**.

2. Attack Type Breakdown

Attack Category	Count	Percentage	Risk Level
SQL Injection	2	100.0%	HIGH

3. Top Attacking IP Addresses

Rank	IP Address	Blocked Requests	Recommendation
#1	10.0.0.99	1	Monitor closely
#2	185.220.101.99	1	Monitor closely

#3	192.168.1.100	1	Monitor closely
----	---------------	---	-----------------

4. Recent Attack Timeline

Timestamp	IP Address	Verdict	Attack Type	Score
2026-03-16 08:03:57	10.0.0.99	BLOCK	Anomaly	100
2026-03-15 17:10:42	192.168.1.100	BLOCK	SQL Injection	100
2026-03-15 16:21:31	185.220.101.99	BLOCK	SQL Injection	100
2026-03-15 16:19:30	50.0.0.1	FLAG	Anomaly	25

5. Security Recommendations

Priority	Recommendation	Details
HIGH	Review and permanently ban top attacking IPs	3 IPs detected with repeated attacks
MEDIUM	Investigate ML-flagged zero-day attempts	3 anomalous requests detected without matching signatures
CRITICAL	Immediate review of CRITICAL severity alerts	2 critical incidents require immediate attention
INFO	Enable Redis for rate limiting	Install Redis to activate brute-force protection
INFO	Set up Slack/Discord webhook alerts	Configure real-time notifications for CRITICAL alerts
INFO	Schedule daily automated reports	Run report_generator.py daily via scheduled task
