

Report Generated:

June 29, 2026 at 20:47 UTC

Analysis Window:

Last 24 hours (2026-06-28 15:17 — 2026-06-29 15:17)

System Version:

SentinelShield v2.0 (Phase 1+2+3+4)

Detection Engine:

31 Signatures + ML Isolation Forest + GeoIP

1. Executive Summary

Metric	Value	Status
Total Requests Analyzed	0	
Requests Blocked	0	0% block rate
Requests Flagged	0	Under review
Requests Allowed	0	Clean traffic
Zero-Day Anomalies (ML)	0	ML detected
IPs Currently Banned	4	Active bans
Critical Alerts	0	

During the analyzed period, SentinelShield processed **0 HTTP requests** and detected **0 malicious or suspicious requests** (0% block rate). The ML anomaly detector independently identified **0 potential zero-day attacks** with no matching signature rules. Overall risk level: **LOW**.

2. Attack Type Breakdown

No attacks detected in this time window. ■

3. Top Attacking IP Addresses

No attacking IPs recorded in this time window.

4. Recent Attack Timeline

No attacks recorded in this time window.

5. Security Recommendations

Priority	Recommendation	Details
INFO	Enable Redis for rate limiting	Install Redis to activate brute-force protection
INFO	Set up Slack/Discord webhook alerts	Configure real-time notifications for CRITICAL alerts
INFO	Schedule daily automated reports	Run report_generator.py daily via scheduled task
